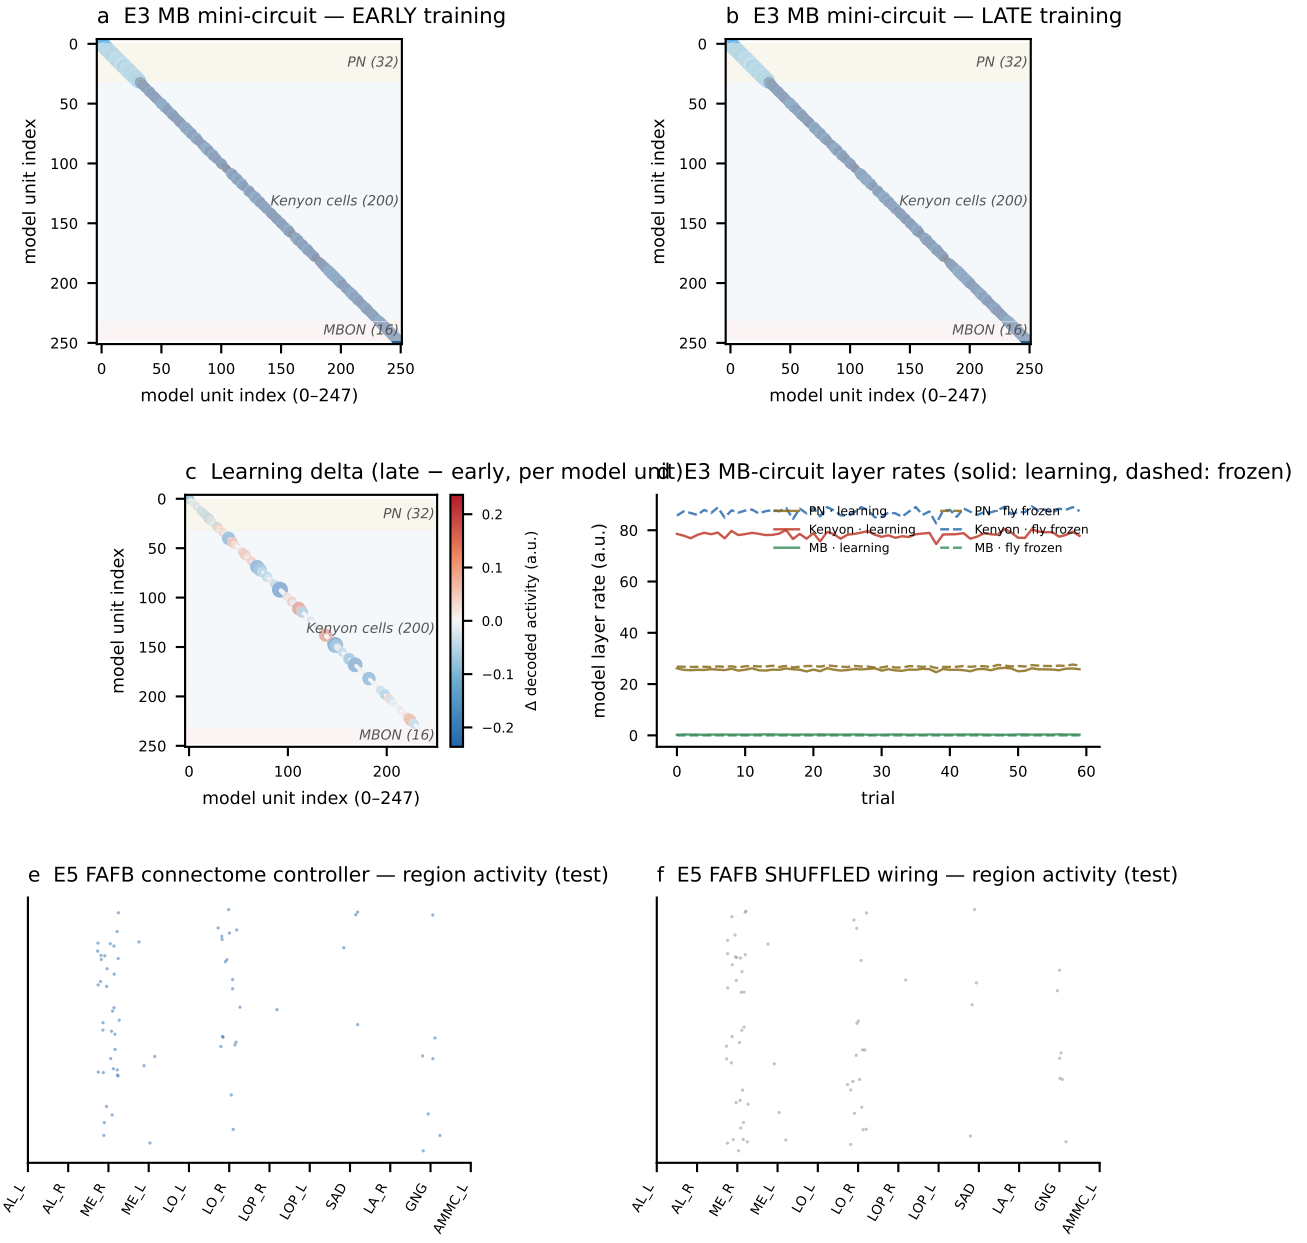

Figure 14 — Door-task brain outcome at honest scopes: MB mini-circuit (E3) and FAFB connectome (E4/E5)

Points: individual neurons (jittered); size/opacity = decoded model spike counts. a–c: 248-unit MB mini-circuit (E3 controller) — model units, NOT FAFB anatomy. e–f: full 106,765-neuron FAFB circuit (E5 connectome conditions).
